A Prime number is a whole number that has two factors, one and itself.

Example: 5 is a prime number because the only numbers you can multiply to get to five is 1, and 5, $1 \times 5 = 5$

Factor? Factors are the numbers you multiply together to get another number: Example1: 1 and 5 are factors of 5 $1 \times 5 = 5$

example2: 3 and 4 are factors of 12 $3 \times 4 = 12$
